# Checklist for Acute Respiratory Infection management in Educational Settings

Aim: To manage Outbreaks of Acute Respiratory Infections (ARI) efficiently and effectively to:

- Reduce the number of cases and potential complications
- Reduce disruption to educational establishments

#### **BOX 1: COVID-19 KEY DEFINITIONS**

Note all ARI should be treated as COVID-19 unless test negative. This is because the most stringent measures are required for COVID-19.

#### **Case definitions:**

Confirmed case: LFD or PCR COVID-19 positive person with or without symptoms

**Possible case:** new continuous cough and/or high temperature and/or a loss of, or change in, normal sense of taste or smell (anosmia)\*

Note: schools and clinicians should be alert to atypical presentations in children who are immunocompromised.

Note2: whilst a broader range of symptoms can be associated with COVID-19, these other symptoms do not currently trigger the need to isolate and test. However, any child who is unwell should not be in their setting. If their symptoms develop into the above, they should isolate and get tested.

# Contact definitions:

- 1. anyone who lives in the same household as someone with COVID-19 symptoms or who has tested positive for COVID-19
- 2. anyone who has had any of the following types of contact with someone who has tested positive for COVID-19:
  - a. face-to-face contact, including being coughed on or having a face-to-face conversation within one metre
  - b. been within one metre for one minute or longer without face-to-face contact
  - c. been within 2 metres of someone for more than 15 minutes (either as a one-off contact, or added up together over one day)
  - d. travelled in the same small vehicle or a plane
  - e. travelled in close proximity in the same large vehicle (e.g. school bus or public transport)

Infectious Period (time when a case can infect others): From 2 days before to 10 days after onset of symptoms (use test date if no symptoms, adjust to symptom date if symptoms develop)
Incubation Period (time period between exposure to case and development of symptoms): Usually 5-6 days (can be between 1 to 14 days).

# **BOX 2: Influenza (flu)- Key definitions**

#### **Case definitions:**

**Influenza Like Illness (ILI):** Fever of >37.8° PLUS new onset or acute worsening of one or more respiratory symptoms: cough (with or without sputum), hoarseness, nasal discharge or congestion, shortness of breath, sore throat, wheezing, sneezing

Confirmed: Laboratory confirmed influenza

**Infectious Period:** From 12 hrs before to 3 - 5 days after onset (can be 7 days or longer in young children.)

**Incubation Period:** Short, usually 1 - 3 days, but possibly up to 5 days.

#### **Outbreak**

Two or more cases arising within a single 7 day period and with evidence of transmission within the school (e.g. have been in the same sports team, classroom, after school group during at least one of the 3 days before onset or after onset in the absence of a known, alternative source of infection)

Note: time limits are flexible – clinical judgement can be used

Note2: Colds are not included in this outbreak definition (runny or blocked nose, sore throat, headache, non-productive cough, no fever)

### **BOX 3: Acute Respiratory Outbreak- Key definitions**

The occurrence of 2 or more cases of with either ILI or COVID-19 symptoms within a 14-day period, with an epidemiological link to the school or educational setting and without laboratory confirmation.

Note: if suspected cases had tested negative for COVID-19, would only be considered an ARI outbreak if fevers were present.

# Key information about the case(s)

- Onset date & time:
- o Test type (LFD or PCR)
- Symptoms
- o Connection to confirmed cases of COVID-19 (e.g. within the setting or in the community)
- Dates last in setting

# Key information about the setting

- Onset date & time in first case:
- Onset date & time of last case
- o Total number of confirmed cases in staff/students
- Total number of children at the school/nursery:
- o Total number of staff employed in the school/nursery:
- For the affected class/ group:
  - o Total number of children in the affected class/ group:
  - Total number of staff in the affected class/ group:
- Number of symptomatic students (at time of reporting the outbreak):
- Number of symptomatic staff (at time of reporting the outbreak):
- Numbers of Staff/ Children in clinical risk groups

Checklist for a single possible case		
Action	Date	Signature
IF CHILD/STAFF BECOME SYMPTOMATIC WITHIN THE SETTING: Send		<b>0</b>
symptomatic cases home to get PCR tested. Children who develop		
symptoms should be isolated in a room behind closed doors (with		
age-appropriate adult supervision) until collected by parent/carers.		
age appropriate addit supervision, until collected by parent, carers.		
If staff member providing support within 2 metres, ensure correct use		
of PPE (see below and page 8)		
of the (see below and page of		
If isolation is not possible, they should be moved to an area at least 2		
metres from other people.		
metres from other people.		
If parents/carers unable to collect, it is age-appropriate and they can		
avoid public transport or contact with others, a young person can		
make own way home.		
Advise anyone with COVID symptoms to get a PCR test. They can do		
so via the <u>online testing portal</u> or by calling 119.		
LED tests should not be used for me sale with sometimes		
LFD tests should not be used for people with symptoms.		
Case and household (and support/childcare bubbles, if active)		
contacts must isolate until results of testing are available.		
Papart possible cases of COVID 10 to the headteacher (pupils staff		
Report possible cases of COVID-19 to the headteacher (pupils, staff		
and visitors) to help to identify cases early and Inform the Local		
Authority if this is your local standard procedure.		
You do not need to isolate school contacts of a possible cases before		
the test result is known unless you are advised to by the health		
protection team (HPT) or your local authority public health teams*.		
Check for a test result within 48 hours. If results are not available,		
then risk assess if there is a need for further public health action as		
per a confirmed case. The HPT/ local authority will help you do this.		
*If the symptomatic person cannot or will not test or has had		
household or enduring contact with someone who is a confirmed		
case, discuss with the DfE helpline (0800 0468687) HPT/ local		
authority who can advise you on next steps.		
Results of COVID testing:		
If positive- treat as a confirmed COVID case		
If negative and child/staff member still unwell- The individual should		
remain at home until fully recovered and at least 24 hours free of		
fever. If parent/carer symptoms, or they cannot be managed via		
home case, they should see medical advice (GP, 119, or 999 in an		
emergency)		
If negative and child/staff member is well, fever free for at least 24		
hours AND there are no other identified risks (for example, close		
contact of a confirmed case or another household member awaiting		
results) can return to school and end isolation.		
,		
Note: if there are 2 or more cases with fever and additional		
respiratory symptoms that have tested negative for COVID-19, this		
, , , , , , , , , , , , , , , , , , , ,		

indicates an unspecified ARI outbreak. Continue to exclude cases until 24 hours fever free and call the Health Protection Team if spread continues (e.g. >5 cases), there are admissions to hospital, or your setting caters for children with special needs.	
<b>Cleaning:</b> Please follow guidance as described on page 7. The HPT can advise you on this if anything is unclear.	
<ul> <li>PPE (see page 8)</li> <li>Those undertaking cleaning of an area where a suspected case has spent significant time should wear disposable gloves and aprons as a minimum.</li> <li>Adults who accompany/ care for a symptomatic child in isolation and coming within 2 m distance of the child should wear gloves, aprons and masks.</li> <li>Risk assess need for eye, nose and mouth protection whilst cleaning/ accompanying symptomatic child (see page 8).</li> </ul>	
Residential schools: see page 8	

Checklist for a single case of confirmed COVID-19						
Action	Date	Signature				
<b>IF CHILD/STAFF TESTED POSITIVE ON-SITE (e.g via rapid testing programme)</b> They should be isolated in a room behind closed doors (with age-appropriate adult supervision) until collected by parent/carers.						
If staff member providing support within 2 metres, ensure correct use of PPE (see below and page 8)						
If isolation is not possible, they should be moved to an area at least 2 metres from other people.						
If parents/carers unable to collect, it is age-appropriate and they can avoid public transport or contact with others, a young person can make own way home.						
If case tested positive using an LFD as part of an asymptomatic testing programme, advice to take a follow-up PCR within 48 hours of the positive LFD.						
Isolation of the case and contacts start immediately following a positive test by LFD or PCR. Do not wait for a follow-up PCR result to take action*						
*If the follow-up PCR result is negative and the case remains well, isolation of contacts can end. So long as the case has not been identified as a close contact of another confirmed case, they can also leave isolation.						
Confirmed cases and their household (and support or childcare bubble if active) must isolate at home until at least 10 days after the onset of symptoms or date of positive test, if asymptomatic.						

If an asymptomatic case subsequently develops symptoms, they must restart their isolation period and isolate for 10 days from their date of onset. (see Stay at home guidance (publishing.service.gov.uk))  If fever persists on day 10, isolation is needed until temperature returns to normal.  Report further suspected cases of COVID-19 to the headteacher (pupils, staff and visitors) to help to identify cases early.  Telephone the DfE advice line on 0800 0468687 if you require advice. You are not obliged to call them - only call if you need advice.  Inform the Local Education Authority, if this is your local standard procedure  NHS Test and trace  Staff and children who have been in close contact with the confirmed case must isolate for 10 days.  Household contacts of contacts do not need to self-isolate.  Settings can report close staff contacts to the isolation hub by calling 020 3743 6715. Contacts reported to the isolation hub will receive the 8-digit code required to claim, if eligible, the £500 isolation payment. This is helpful to staff members who would otherwise not receive an income during their isolation period.  Advise close contacts to access a PCR test. They can do so via the online testing portal or by calling 119. (They will need to complete their self-isolation even if they test negative as may be incubating the virus for up to 10 days after contact).  If they are positive, repeat the process for a confirmed case- they will need to isolate for 10 days from the date of their test.
onset. (see Stay at home guidance (publishing.service.gov.uk))  If fever persists on day 10, isolation is needed until temperature returns to normal. so via the <u>online testing portal</u> or by calling 119.
Cleaning: Please follow guidance as listed on page 7. The HPT can
advise you on this if anything is unclear.
PPE (see page 8)
Those undertaking cleaning of an area where a confirmed case
has spent significant time should wear disposable gloves and
aprons as a minimum.
Adults who accompany/ care for a confirmed child in isolation
and coming within 2 m distance of the child should wear gloves,
aprons and masks.

(Either confirmed COVID-19 or ARI following negative CO	VID-19 tests)	
Action	Date	Signature
Is it an outbreak or a cluster? See definitions in Box 1		
Follow all actions for each possible and confirmed case as		
appropriate.		
All newly symptomatic cases MUST isolate and test for COVID-19,		
even if you suspect a different infection is circulating.		
If case tests positive - continue to follow confirmed case checklist for		
each case		
If case tests negative, case to remain at home until well and fever free		
for at least 24 hours.		
Tot at least 24 flours.		
If there are concerns about symptoms, or ability to manage care at		
home, parents/carers should seek medical advice (GP, 111, 999 in an		
emergency).		
For confirmed cases of COVID, identify close contacts (as described		
in Box 1) and isolate them for 10 days since exposure to case and		
advise them to arrange a PCR test (They will need to complete their		
self-isolation even if they test negative as may be incubating the virus		
for up to 10 days after contact)		
Inform any neighbouring schools/ attached childcare facilities		
Reinforce that anyone with symptoms needs to inform you, isolate		
with their household and get tested. They can book a test via the		
online testing portal or by calling 119. Ensure they report results back to you immediately.		
Elisare they report results back to you illimediately.		
If parts of the school are unaffected, try to keep staff and pupils in		
unaffected areas away from affected areas wherever possible.		
Reinforce infection control messages:		
Reinforce good hand hygiene among all (including visitors, staff, and		
children/ students). Ensure hand wash basins are accessible and are		
well stocked with liquid soap and paper towels.		
Emphasize respiratory etiquette (cover coughs and sneezes, dispose		
of tissues properly) e.g. Catch it, Bin it, Kill it.		
Use posters to back up verbal instructions on respiratory etiquette		
and hand hygiene. <b>Lesson plans</b> for primary and secondary schools about respiratory		
hygiene are available at <u>eBug</u> .		
Discourage sharing water bottles or water fountains.		
Communications: Consider who needs to be told and how you are		
going to communicate:		
<ul> <li>How are parents/carers going to be kept informed?</li> </ul>		
<ul> <li>Consider whether a (reactive) press statement should be</li> </ul>		
prepared. The local authority/ HPT can assist you with this.		
Consider whether bubble closure is required. Closing the school is <b>not</b>		
routinely advised during an outbreak but should be discussed with		
the Health Protection Team and the LEA in exceptional circumstances.		
The most important factor in this decision is whether the school can		
function with depleted staff numbers.		
Residential schools: please see page 8		

#### Call the HPT IF

- You have > 5 cases of confirmed COVID-19 or ARI (e.g. Fever AND at least one other respiratory symptom)
- You have 2 or more cases of ARI and you are a setting that specifically caters for children with special needs.
- There are any admissions to hospital for ARI/COVID-19
- You are having problems implementing the control measures;
   or
- You have applied the control measures and are still seeing a significant rise in cases.
- You have Influenza (i.e. Flu A or Flu B (not Parainfluenza) confirmed by a laboratory sample in anyone who attends the setting (to consider the use of antiviral medicines (Tamiflu® / Relenza®)

Cleaning after a suspected or confirmed COVID-19 case has been in the school whilst symptomatic

Schools are already undertaking enhanced and more frequent cleaning as routine practice. This will help to minimise transmission of infection within the school setting.

The following guidelines are reinforcing what is already being done routinely.

- Public areas where a symptomatic individual has passed through and spent minimal time, such as corridors, but which are not visibly contaminated with body fluids can be cleaned thoroughly as normal.
- All surfaces that the symptomatic person has come into contact with must be cleaned and disinfected, including:
  - o objects which are visibly contaminated with body fluids
  - o all potentially contaminated frequently touched surfaces e.g. door handles, taps, light switches, call bells, telephones, computer keyboards
- The regular cleaning of frequently touched surfaces should continue
- Use disposable cloths or paper roll and disposable mop heads, to clean all hard surfaces, floors, chairs, door handles and sanitary fittings.
- Use combined detergent disinfectant solution or a household detergent followed by hypochlorite solution 1000ppm (e.g. diluted Milton). If an alternative disinfectant is used within the organisation, this should be checked and ensure that it is effective against enveloped viruses.
- Avoid creating splashes and spray when cleaning.
- When items cannot be cleaned using detergents or laundered, for example, upholstered furniture and mattresses, steam cleaning should be used.
- Any cloths and mop heads used must be disposed of and should be put into waste bags as outlined below.
- Any items that are heavily contaminated with body fluids and cannot be cleaned by washing should be disposed of.
- If cleaning staff develop symptoms, they must inform their manager immediately, self-isolate and get tested.
- Hypochlorite is a bleach solution, which must be made up freshly to be effective (examples of chlorine releasing tablets are Haztabs® and Sanichlor®). Instructions on how to make the solution to the correct strength can be seen on the packet and some manufacturers provide a mixing container to accurately mix the solution in.

# Personal protective equipment (PPE)

- You should continue with your standard practices if you are in a setting where you use wear PPE to conduct your routine work (e.g. special school, nursery). During the coronavirus outbreak additional PPE is only required in a limited number of scenarios:
  - Following a symptomatic or confirmed case, cleaners should wear disposable gloves and aprons as a minimum.
- If a risk assessment of the setting indicates that a higher level of virus may be present (for example, where unwell individuals have slept such as a boarding school dormitory) or there is visible contamination with body fluids, then the need for additional PPE (fluid-resistant mask (Type IIR) and eye protection) to protect the cleaner's eyes, mouth and nose might be necessary.
- Adults who accompany/ care for a suspected or confirmed child in isolation and come within 2 m distance of the child should wear gloves, aprons and masks. Eye protection may also be required when coming into close contact with a symptomatic person who is vomiting/ coughing/ spitting (e,g. If there is a risk of splashing to the eyes).
- Wash hands thoroughly after removing PPE.
- The local Public Health England (PHE) Health Protection Team (HPT) can advise on risk assessing complex scenarios.

# Laundry

- Wash items in accordance with the manufacturer's instructions. Use the warmest water setting and
  dry items completely. Dirty laundry that has been in contact with an unwell person can be washed
  with other people's items.
- Do not shake dirty laundry, this minimises the possibility of dispersing virus through the air.
- Clean and disinfect anything used for transporting laundry with your usual products, in line with the cleaning guidance above.

#### Waste

- Waste from possible cases and cleaning of areas where possible cases have been (including disposable cloths and tissues):
  - o Should be put in a plastic rubbish bag and tied when full.
  - The plastic bag should then be placed in a second bin bag and tied.
- Waste should be stored safely and kept away from children. You <u>should not</u> put your waste in communal waste areas until negative test results are known or the waste has been stored for at least 72 hours.
- Settings which normally generate clinical waste should continue their usual waste policies

# Advice specific for residential or special schools:

Safe working in education, childcare and children's social care settings, including the use of personal protective equipment (PPE) - GOV.UK (www.gov.uk)

# Guiding principles:

- Residential school settings are considered as a household for the purposes of isolation. The
  isolation unit will depend on individual circumstances e.g. could be a dormitory or an isolated
  building. The HPT can help schools with the risk assessment and the defining of a group/ household
  that needs isolation. In most instances, people who share a bathroom and/ or kitchen will be
  defined as a household.
- If a student/ staff member develops symptoms or tests positive for COVID whilst away from the school setting they should NOT return to school and must self-isolate at home.
- If a student/ staff member has been in contact with someone with symptoms or a positive test at home, they need to self-isolate at home and not return to the school.

• These settings are likely to have staff visiting rather than residing on site. In such circumstances, infection control procedures for staff entering and leaving the site are crucial.

If a student/ staff member develops symptoms or tests positive for COVID: *Isolate immediately:* 

- Guidance on self-isolation can be found here.
- Decide whether the child is best kept in the school or can safely (and without using public transport) be sent home to isolate.
- If possible, have a plan in place pre-emptively for each resident child for how child will isolate (stay in the school/ or return home) should they develop symptoms or test positive for COVID.
- Contacts of the child, both in the school learning environment and their household environment will need to isolate for 10 days. Contacts who undertake extra-curricular and social activities with a confirmed case will also need to be identified. The HPT can help with identifying the group(s) who need to isolate.
- If it is not possible to send students home, cohort symptomatic students in one area and keep them away from others.

• If you have to send this personal data to others please ensure that it is sent securely

# Daily Log Template List of staff/ students with suspected / confirmed COVID-19 infection

In the event of a COVID-19 outbreak, the table will ensure that important information is recorded in one place and is easily accessible

Name	Date of birth	Class/ Bubble	Date of onset of symptoms	Symptoms *	Date swabbed (if swabbed)	Swab result	Attendance during infectious period**	

\*Symptoms T = High Temp (>=37.8 C1), C = Cough, A = Anosmia (change or loss of taste/ smell)

\*\* Infectious period - from 2 days prior to symptom onset to 10 days after, or 2 days prior to test if asymptomatic

<sup>&</sup>lt;sup>1</sup> But does not have to be confirmed via a temperature check to trigger testing and isolation.
